

BioRev NAD+

Nutrition and gut care · MEN and WOMEN formulations

Explore formulation designs for MEN and WOMEN around NAD-related nutrition and probiotics. A brown MEN bottle and a white WOMEN bottle form the two-bottle set. Retail price: USD 1,000 for the set or USD 600 for one bottle.

More attention to everyday wellbeing

For those who value their quality of life

Busy work, frequent travel and changing routines make everyday nutrition worth considering carefully. BioRev aims to make formulation choices clear and nutritional supplementation part of sustainable daily habits.

Understanding NAD+

An important intracellular coenzyme

NAD+ stands for nicotinamide adenine dinucleotide. It participates in cellular oxidation–reduction reactions and forms part of the body's metabolic system. This chapter introduces NAD-related physiology.

The science of energy metabolism

Energy from food is transformed through metabolism

NAD participates in the transfer of energy from nutrients towards ATP production. Understanding this process helps explain the research direction of NAD-related nutrition. This chapter presents general knowledge about energy metabolism.

NAD+, NMN and vitamin B3

Similar names, different ingredients

NAD+ is the series name and scientific background. NMN is an NAD precursor included in the capsule formulation design. Nicotinamide and nicotinic acid are different forms of vitamin B3. BioRev NAD+ is the name of this collection; the original capsule formulation does not list directly added NAD+.

Research and nutritional choices

Understand the ingredient and the study population

Human research has reported on oral NR, NMN and NAD-related metabolic measures. Distinguishing the studied ingredient, dose, dosage form and participants helps readers interpret nutritional research accurately.

A combined formulation concept

NAD-related nutrition alongside attention to gut health

The MEN and WOMEN formulation designs bring NAD-related nutrition and probiotics into a shared concept focused on everyday nutrition and gut care. The following chapters introduce nutritional ingredients and specific bacterial strains separately.

Morinaga probiotics · BB536

Understanding a specific strain

BB536 is a Bifidobacterium longum strain researched by Morinaga Milk Industry. Research and official information on related Morinaga foods discuss the intestinal environment and bowel movements. This page introduces the strain as background knowledge.

A strain name matters more than a broad category

Making individual ingredients identifiable

“Probiotics” is a category; a strain provides a specific identity. Strain names on a product label help readers distinguish ingredients and locate research relevant to each one.

Quality details in probiotic formulations

Attention to live-bacteria stability

Probiotic formulations involve compatibility between live bacteria, other ingredients, capsule processing and storage conditions. Daily viable counts, guaranteed counts at the end of shelf life, packaging and storage requirements are important quality information.

WOMEN formulation

A refined expression in cream white and gold

The WOMEN formulation materials combine NMN, vitamins and botanical ingredients. A white bottle and gold cap coordinate with the MEN bottle as part of one collection.

WOMEN formulation information

Original formulation design · amount per capsule

The table presents the original formulation design from the product brochure.

Ingredient	Original design / capsule
Nicotinamide	100 mg
NMN ingredient (proposed)	75 mg
Nicotinic acid	30 mg
Resveratrol	20 mg
White tomato extract	20 mg
Leucine	50 mg
Quercetin	25 mg
Vitamin B12	4 µg
Biotin	50 µg

The NMN formulation direction

Formulation design: 75 mg per capsule

The original MEN and WOMEN formulation materials both list 75 mg of NMN ingredient per capsule. The collection emphasises clear presentation of nutritional ingredients. For everyday use, read the ingredients and directions on the product label.

Botanical ingredients in WOMEN

Resveratrol and white tomato extract

The original formulation design includes 20 mg of resveratrol and 20 mg of white tomato extract per capsule, alongside 25 mg of quercetin. These choices describe the formulation's botanical ingredient direction.

The role of leucine in the formulation

Formulation design: 50 mg per capsule

Leucine is included as one nutritional component in the WOMEN formulation materials. Everyday nutritional management also considers overall diet and individual needs.

MEN formulation

A composed expression in brown and gold

Alongside the shared nutritional base, the MEN formulation includes tongkat ali extract, curcumin and black pepper extract. These different ingredient choices help customers understand the distinction between the MEN and WOMEN designs.

MEN formulation information

Original formulation design · amount per capsule

The table presents the original formulation design from the product brochure.

Ingredient	Original design / capsule
Nicotinamide	100 mg
NMN ingredient (proposed)	75 mg
Nicotinic acid	30 mg
Tongkat ali extract	5 mg
Curcumin	40 mg
Black pepper extract	5 mg
Quercetin	50 mg
Vitamin B12	4 µg
Biotin	50 µg

Tongkat ali ingredient direction

Formulation design: 5 mg per capsule

Tongkat ali extract is a distinctive ingredient in the MEN formulation design, listed at 5 mg per capsule in the original materials. Distinguish extract weight from the amount of its active constituents when reading ingredient information.

Curcumin ingredient direction

Formulation design: 40 mg per capsule

Curcumin is one of the distinctive ingredients in the MEN formulation design. Distinguishing turmeric raw material, extract weight and curcumin content makes ingredient information easier to understand.

Black pepper extract

Formulation design: 5 mg per capsule

The MEN formulation materials include black pepper extract at an original design amount of 5 mg per capsule. Together with the other botanical ingredients, it forms part of the MEN ingredient selection.

Two forms of vitamin B3

Understanding nicotinamide and nicotinic acid separately

Both original formulations list nicotinamide at 100 mg and nicotinic acid at 30 mg per capsule. Vitamin B3 participates in energy metabolism. Nicotinic acid may cause flushing or other discomfort; follow the product label for everyday use.

Vitamin B12

Formulation design: 4 µg per capsule

Vitamin B12 contributes to normal red blood cell formation, nervous-system function and DNA synthesis. Both MEN and WOMEN formulation designs list 4 µg per capsule.

Biotin

Formulation design: 50 μg per capsule

Biotin participates in fatty-acid, glucose and amino-acid metabolism. Both formulation materials list 50 μg per capsule. This chapter introduces its nutritional role.

Balance within a combined capsule

A formulation also depends on suitable processing

Capsule design considers fill weight, ingredient combinations, viable-bacteria stability and convenience. Clear label information helps customers understand the product and use it as directed.

Two bottles, presented together

A white gift box for two nutritional choices

The white box holds one translucent brown MEN bottle and one white WOMEN bottle. A champagne-gold ribbon forms a bow on top, with a small brand mark and a clearly presented NAD+ name.

From specifications to batch testing

Understanding information for a specific batch

A specification states requirements; a batch COA records test results for a particular raw-material or product batch. Traceable batch numbers, test methods and report signatures or stamps help customers understand quality documents.

The white carry bag

A coordinated expression from product to gift

The white bag accompanies a white two-bottle box tied with champagne-gold ribbon, with coordinated BioRev logos. White and gold details create consistency across everyday purchases, gifting and brand presentation.

Coordinated MEN and WOMEN bottles

Brown MEN + white WOMEN

The translucent brown bottle retains the MEN mark, and the white bottle retains WOMEN. Bottle shape, gold caps and label styling are coordinated. The same bottle set is used throughout the brochure, with a white two-bottle box and carry bag.

Choosing between MEN and WOMEN

Consider the formulation and your circumstances

Shared base: NMN, vitamins B3 and B12, and biotin. WOMEN botanical and nutritional choices: resveratrol, white tomato and leucine. MEN choices: tongkat ali, curcumin and black pepper. The names do not mean the formulations suit every woman or man.

Everyday use

Read the product label

Before use, check the suggested daily amount, ingredients and any other supplements you take. Calculate capsule numbers and duration from the product label and avoid duplicating the same ingredients.

A supplement plan suited to you

Discuss special circumstances with a doctor or pharmacist

People taking medication, living with chronic illness, planning pregnancy, pregnant or breastfeeding, or with significant immune impairment should seek professional assessment first. Stop use and consult a professional if notable discomfort develops. Do not independently give adult formulations to children.

The everyday foundations of nutrition

A consistent routine is worth maintaining

Place supplementation within a stable routine that makes room for diet, rest and activity. Products are only one part of nutritional management. Persistent fatigue, insomnia or intestinal discomfort calls for investigation of the cause.

Gift-set contents

Two bottles in one box, with a white carry bag

MEN: one translucent brown bottle. WOMEN: one white bottle. Gift box: white, holding both bottles. Accompanying packaging: a white carry bag.

Single-bottle and two-bottle retail prices

Four currencies for a clear choice

One bottle: CNY 3,800 / JPY 90,000 / USD 600 / KRW 80,000. Two bottles: CNY 6,800 / JPY 160,000 / USD 1,000 / KRW 138,000. The two-bottle set includes MEN × 1, WOMEN × 1, a white gift box and carry bag.

Frequently asked questions

Clear information before you buy

Is it the same as intravenous NAD+? The dosage form and formulation differ; information about intravenous products cannot be directly applied to oral capsules. What can I choose? One MEN bottle, one WOMEN bottle or the two-bottle set. How do I use it? Read the ingredients and directions on the product label. Nutritional supplements do not replace diagnosis or treatment.
